## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-12 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The closest prior art:

US 6,049,223 (Lytle et al) teaches Programmable logic array integrated circuit with general-purpose memory configurable as a random access or FIFO memory utilizing interconnections between a programmable interconnect array and a memory block of the programmable logic device integrated circuit using fully populated multiplexing; the RAM/FIFO may be dual-port memory accessible using separate read and write address ports to facilitate implementation of a dual-port memory embodiment and single-port memory embodiment of the RAM/FIFO block;

US 6,038,627 (Plants) teaches dual-ported static random access memory to be embedded in programmable logic device and capable of being used as single port RAM, employing a plurality of pass-through interconnect conductors, each of said plurality of said pass-through interconnect conductors connected to a first plurality of programmable connectors and connected to a second plurality of programmable connectors;

US 5,933,023 (Young) teaches programmable logic devices or field programmable gate arrays formed in integrated circuits comprising an array of

programmable logic blocks which can be programmably interconnected to each other employing dual ported RAM memory configured as dual ported memory or single ported memory;

US 6,020,759 (Heile) teaches programmable logic device using user-configurable blocks of random access memory (RAM) are provided among blocks of look-up-table type programmable logic; the programmable logic array device having configurable random access memory (RAM) RAM blocks embedded among logic blocks includes one or two small look-up tables and being surrounded by interconnection conductors for conveying signals to, from, and between the configuration logic blocks (CLBs).

The noted references made of record teach similar correlating system as the present invention. However, none of the prior art of record anticipates or renders obvious the recited features,

*“programmable interconnection resources for connecting conductors in a plurality of groups of interconnection conductors to one another and a plurality of logic resources,*

*where a first programmable interconnection resource connecting port conductors in a read port to a selected one of said plurality of groups of interconnection conductors and a second programmable interconnection resource connecting port conductors in a write port to a selected one of said plurality of groups of interconnection conductors”,*

where the interconnection resources are less than fully populated, but are sufficiently populated to allow a particular interconnection conductor to be connected to corresponding conductors in both read and write ports.

These features, in combination with the other features of the claims, having been recited in independent claims 1, 3, 4, 7, 9 and 10, render the claims allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
